

metal forming forging and pdf

Forging is a manufacturing process involving the shaping of metal using localized compressive forces. The blows are delivered with a hammer (often a power hammer) or a die. Forging is often classified according to the temperature at which it is performed: cold forging (a type of cold working), warm forging, or hot forging (a type of hot working). For the latter two, the metal is heated, usually ...

Sheet metal is metal formed by an industrial process into thin, flat pieces. Sheet metal is one of the fundamental forms used in metalworking and it can be cut and bent into a variety of shapes. Countless everyday objects are fabricated from sheet metal. Thicknesses can vary significantly; extremely thin sheets are considered foil or leaf, and pieces thicker than 6 mm (0.25 in) are considered ...

Creating protruded surface features on sheet metal, however, presents interesting technical challenges. Extrusion-forging is a bulk metal forming process that combines extrusion and forging into one single operation.

This question, "Forging vs. Casting: Which is better?" is one that I have been asked many times. To properly explore the answer, let's first consider the process of each. Forging and casting are two very different manufacturing methods.

5 and shear cutting which generally requires a die to contain the tube to prevent deformation during the operation. Seamless Tubing Made by piercing, extrusion, and gun drilling of a metal bar. Piercing is a controlled tearing of a hole in a hot metal bar then ironing the sides to produce a smooth walled tube.
