Some methods consider that the fullerene is formed with atoms which were added one by one or as molecules (C<sub>2</sub>, C<sub>3</sub>) and by isomerization of some type of precursor molecule, for example.

Molecular dynamics and thus phase transitions can also be induced by using light irradiation if the supramolecular network contains light responsive functional units. Azobenzene-based organic building blocks have often been used to extract reversible photoresponse [56,57] from molecular nanostructures.

Book Review: This is a very good textbook on electrical, optical, magnetic and thermal metal properties. This is suitable for courses at the undergraduate level and is beneficial to mechanical and electrical engineers who want to know about alloys, semiconductor devices, lasers, magnetic materials and so on.
