Dr Art Ayers has a PhD in molecular, cellular, and developmental biology and wrote an excellent blog where he described the science behind the wholesale destruction of the body as a result of indiscriminate use of antibiotics.

Antibiotics | Suzanne Humphries, MD

An antibiotic is a type of antimicrobial substance active against bacteria and is the most important type of antibacterial agent for fighting bacterial infections. Antibiotic medications are widely used in the treatment and prevention of such infections. They may either kill or inhibit the growth of bacteria. A limited number of antibiotics also possess antiprotozoal activity.

Antibiotic - Wikipedia

Antiviral drugs are a class of medication used specifically for treating viral infections rather than bacterial ones. Most antivirals are used for specific viral infections, while a broad-spectrum antiviral is effective against a wide range of viruses. Unlike most antibiotics, antiviral drugs do not destroy their target pathogen; instead they inhibit their development.
