Non-equilibrium thermodynamics is a general framework that allows the macroscopic description of irreversible processes. This book introduces non-equilibrium thermodynamics and its applications to the rheology of multiphase flows. The subject is relevant to graduate students in chemical and mechanical engineering, physics and material science.

dynamical descriptions to the more fundamental issues of equilibrium and nonequilibrium thermodynamics.

We will discuss the issues of equilibrium versus nonequilibrium in the context of macroscopic systems, i.e. systems where the size and the scale of the phenomena of interest are much bigger than the molecular

### **Equilibrium Versus Nonequilibrium**

Non-equilibrium thermodynamics is a branch of thermodynamics that deals with physical systems that are not in thermodynamic equilibrium but can be described in terms of variables (non-equilibrium state variables) that represent an extrapolation of the variables used to specify the system in thermodynamic equilibrium.
