A dynamical system has a state determined by a collection of real numbers, or more generally by a set of points in an appropriate state space. Small changes in the state of the system correspond to small changes in the numbers.

A partial differential equation (PDE) is an equation involving an unknown function of two or more variables and some or all of its partial derivatives. The partial differential equation is usually a mathematical representation of problems arising in nature, around us. The process of understanding physical systems can be divided in to three ...

Ordinary and partial differential equations occur in many applications. An ordinary differential equation is a special case of a partial differential equation but the behaviour of solutions is quite different in general. It is much more complicated in the case of partial differential equations caused by the
