In mathematics, computer science and operations research, mathematical optimization or mathematical programming, alternatively spelled optimisation, is the selection of a best element (with regard to some criterion) from some set of available alternatives.. In the simplest case, an optimization problem consists of maximizing or minimizing a real function by systematically choosing input values ...

Numerical analysis is the study of algorithms that use numerical approximation (as opposed to general symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics). Numerical analysis naturally finds application in all fields of engineering and the physical sciences, but in the 21st century also the life sciences, social sciences, medicine ...

This book is an introduction to numerical methods for students in engineering. It covers the usual topics found in an engineering course: solution of equations, interpolation and data fitting, solution of differential equations, eigenvalue problems, and optimization.

Hi Pavel. Nice work. I'm using it now to compute the velocity of a robot (MBARS) and your methods give very good results. I'd like to know if you have the formula of a one-sided version, as using a centered version forces me to introduce a time lag.

I have a bibtex database of optimization references (900K) available online. These are mostly interior point references. A searchable version of this bibliography is also available. I also have an unorganized list of announcements of computational packages that are available for solving a variety of problems. This page is not updated often enough, so some of the links are no longer functional.
