Object-oriented programming (OOP) is a programming paradigm based on the concept of "objects", which may contain data, in the form of fields, often known as attributes; and code, in the form of procedures, often known as methods. A feature of objects is that an object's procedures can access and often modify the data fields of the object with which they are associated (objects have a notion of ...

A scientific model is a simplified abstract view of a complex reality. Scientific models are used as a basis for scientific work. They can be used to explain, predict, and test, or to develop computer programs or mathematical equations.. An example of a complex model is the software used for weather forecasts. The program is based on equations for the variables which affect weather.

Introduction and Overview This review is intended to both provide background on the Scirus search engine and discuss its usability. It is not an exhaustive technical review, but rather an overview that can help librarians determine if and when to use Scirus in reference and instruction environments.
